

CRYPTOCURRENCY
of the **FUTURE**

BORCOIN

WHITE PAPER

by Timur Shakir
September, 2022

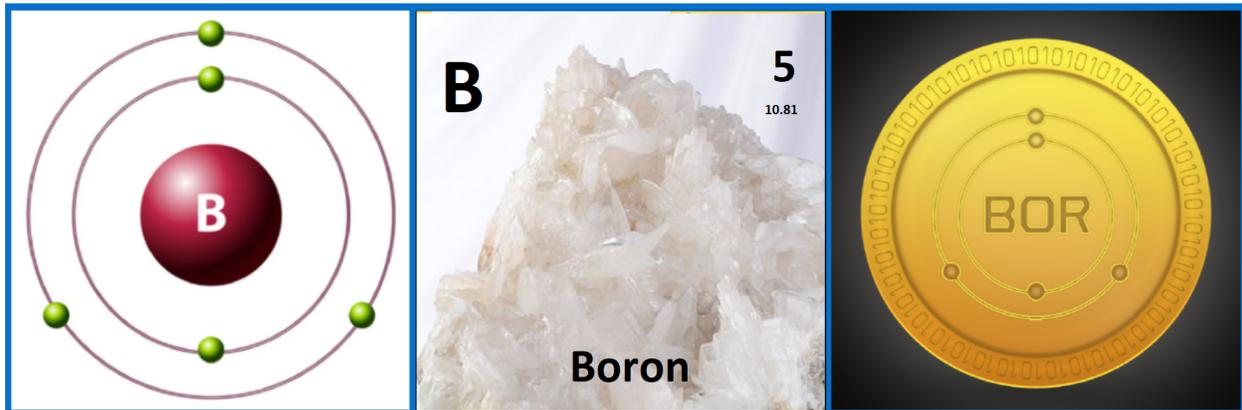

Introduction

Current trends in the cryptocurrency market reflect, in our opinion, the emergence of a new alternative asset class. If at the beginning of the trend crypto assets attracted only technically "advanced" professionals and "crypto-anarchists", now even conservative investors consider them as a potential investment opportunity.

There is a clear demand for an alternative asset class that can bring investors' returns above the traditional "average" level in the long term. The cryptocurrency industry is still in its early stages of development. As the crypto-assets increase in price, more people come into the industry.

The rapid development of cryptocurrencies is an opportunity for investment not only for regular users but for big corporations too. This growth of digital money is a result of technological improvements and the world is constantly trying to use decentralized allocations as a paying method.

BORCOIN (BRC) is an ERC-20 token for a decentralized community to support charity, fundraising, cryptocurrency investments and funds transfers. The name BORCOIN comes from the 5th Chemical Element BORON. Boron is a chemical element with the symbol B and atomic number 5. Boron occurs as an orthoboric acid in some volcanic spring waters, and as borates in the minerals borax and colemanite. The largest known deposits are in Turkiye, the largest producer of boron minerals.

Turkiye and the United States are the largest producers of boron products. Turkiye produces more than half of the global yearly demand, through Eti Mine Works - a Turkish state-owned mining and chemicals company focusing on boron business. And U.S. Borax, part of Rio Tinto, is a global leader in the supply and science of borates –naturally– occurring minerals containing boron and other elements.

Boron is a multipurpose element. It's a crucial nutrient for plants, an important component in the nuclear industry and the main ingredient of a bizarre fluid called oobleck. As you can see, Boron is a very useful element. It is being used widely in many different industries such as Agriculture, Metallurgy, Health, Energy, Wood Protection, Cleaning, Glass, Insulation, and many others.

That is the reason we have chosen BOR as the name of our Coin. We are doing our best to make BORCOIN (BRC) become a widely used coin, which will help our project to be useful for many people worldwide.

BORCOIN (BRC) is a cryptocurrency, which can be used for Secure and Low cost funds transfers, as well as for Investment. Let's discuss each of these aspects separately.

Security

Unless someone gains access to the private key for your crypto wallet, they cannot sign transactions or access your funds. However, if you lose your private key, there's also no way to recover your funds.

Furthermore, transactions are secured by the nature of the blockchain system and the distributed network of computers verifying transactions. As more computing power is added to the network, it becomes even more secure.

Low Cost Transfers

Compared to some other cryptocurrencies, BORCOIN (BRC) can be bought at very low cost at its very beginning. This provides great opportunities to cryptocurrency investors, who have low budgets but who wish to get high profit.

It is a known fact that buying a currency before listing on crypto markets such as BINANCE, COINBASE or others provides a huge opportunity to make good profit on the growth of cryptocurrencies after listing.

Investment

We plan to list BORCOIN (BRC) on most known cryptocurrency exchange markets. And if you have BORCOIN before it becomes available on such markets, then you will have a chance to earn money after it is listed there.

Also, we plan to implement projects based on BORCOIN, which would increase demand of the cryptocurrency and thus will affect the growth of BORCOIN price. At the moment, we are evaluating three online projects. The budget of the projects varies from 250 thousand USD to more than 5 million USD.

Easy & Fast Transfers

It is very easy to make funds transfer using cryptocurrency. You can easily transfer BORCOIN (BRC) for example from your MetaMask wallet to Coinbase Wallet. The transfers are made within seconds. And the commission is really low.

For example, if you try to send money using SWIFT, it may take more than one day and may cost you more than hundred dollars as commission.

We have identified the following tasks as our main areas of activity:

- The development and implementation of cryptocurrency technologies in online projects.
- Investments in cryptocurrencies and other instruments based on cryptotechnologies.
- Support for startups in the field of education, cryptocurrencies, online trading, and other online services.
- Consulting and assistance in business development for small businesses.
- Support for the poor, charity, donation to charitable organizations such as Turkish Red Crescent, International Red Cross, UNHCR, UNICEF and others.

Our vision

In upcoming two years we plan to expand BORCOIN team to more than 100 people, including volunteers, analysts, risk managers, lawyers, software developers. Together, they will cooperate to make systematic investment of funds, manage charity programs, consult our partners worldwide, evaluate high-tech startup projects, and work towards implementing all the projects to bring them to life.

Even if at first glance it may seem that our team is working to increase income from investments, in fact, generating income is only one part of our activities. Below you can find the detailed explanation of the distribution of income.

The income from our activities is planned to be divided into several parts:

- 40% of the income will go to reinvestment in long-term investment instruments. Thus, we plan to ensure a gradual increase in our capital.
- 30% of the income we plan to spend on the development of the project. Obviously, the more people involved in the project, the more effective our programs will be, which are aimed at providing assistance to poor people.
- 20% of the income will go to pay salaries to staff and volunteers, thanks to whom our project functions and develops.
- 10% of the income will be allocated to reserve capital. This is necessary to provide the project with liquidity in case of unforeseen situations, for example COVID-19.

As you can see, the main purpose of our project is to provide support to people who need that support. In order to make it possible, we need finances, personnel and time. We plan to develop our project to the level where the income from invested funds would be sufficient to cover all expenses required to support the activities of our teams all around the world. BORCOIN, once it is listed on crypto exchanges, will become a good instrument for investment.

After being listed on such exchanges as Coinbase, Binance, and other known crypto markets, its price is expected to increase and

this will provide a good chance for the investors to make good profit.

From our side, we as a team will initiate the planned programs to reinvest money, to support different projects, to spend money for charity and we will also expand our activities on supporting prospective startup projects. We believe that all these activities will contribute to the development of different parts of the world. Besides that, we are confident in the success of our investing programs, which we are implementing based on our experience.

Charity - Action Against Hunger

Some facts about hunger in the world:

- 828 million People Go to Bed Hungry Each Night
- 14 million Children Under 5 Suffer from Severe Acute Malnutrition, the Deadliest Form of Hunger
- 75% Of Acutely Malnourished Children Do Not Have Access to Lifesaving Treatment

There are millions of people in the world who need help. Providing money or goods is one of the ways we can help such people. This is an easier and faster way to deliver support to the ones who are in need.

But, there is also another way to help people. We can educate them so that they can find a better way to earn money, develop their society, prevent starving, and make their lives better in the way they would like to. That is why one of the areas where we plan to provide help is education.

It is more efficient to teach someone to catch fish rather than providing them fish from time to time.

Charity - Support Education Worldwide

Education brings knowledge to people and helps to prevent different types of problems:

- Education helps people to get jobs and income.
- Educated people would focus on making their life better, rather than waiting for help from someone else.
- In addition to financial help it is also important to educate people, so they learn how to spend finances more effectively.
